Career Objective

I am Harshit Mishra, an IT B.Tech student at IIMT College with a relentless drive for building impactful technology. I am blending Machine Learning with Web and Python Development, and learning new AI tools like Antigravity, Claude, Opus, AiStudio, etc. and working with AI. Beyond writing code, I am a strategic problem solver with strong analytical and observational skills. My philosophy is simple: I remain deeply passionate and committed to my work until the project is flawlessly executed.

Technical Skills

- Programming: Python, C++, Java | Databases: SQL
- AI/ML: Machine Learning, Deep Learning, Neural Networks, Pandas, NumPy, TensorFlow
- Tools & OS: Linux | Soft Skills: Communication, Collaboration, Good Listening, Observation, Problem Solving, Pressure Handling, Adaptive Nature

Education

- B.Tech CSE (IT) | IIMT College of Engineering College, AKTU | Present
- XII (CBSE) | Army Public School, Sardar Patel Marg, Lucknow | 2023 | 71.6%
- X (CBSE) | Army Public School, Sardar Patel Marg, Lucknow | 2021 | 91.4%

Internship(s)

- **Python Programming Intern | InternPe** (May 2025 – June 2025)

I have successfully completed my internship in Python Programming with InternPe. This one-month journey (12-May-2025 to 08-June-2025) was filled with hands-on learning, problem-solving, and skill enhancement.

Projects

- **Personal Portfolio Website:** Develop a Personal Portfolio Website for better and easier to go through my data that I have such as introduction, skills, projects and contact.
- **Library Management System:** Built a system using Python and MySQL in which library can be managed such as adding a book, issue the book to the student, student details who issue the book, etc.
- **Human Emotion Recognition System:** Developed a system where a person can see their emotions that which facial expression he/she is making.
- **Diabetes Prediction:** Build a system or webpage where a user can enter the data you have and it will give the predicted output that you have diabetes or not.
- **Rock and Stone Prediction with Sonar:** Build a system which collects data and detects rock and stone with the help of sonar.
- **Fake News Prediction:** Building a webpage where a user can find whether the news is fake or real.

Achievements

- Machine Learning Workshop
- Google Data Analytics - Coursera
- Excellence in Machine Learning Foundations
- Advance Internet of Things (IoT)
- Advance Internet of Things (IoT)
- Smart Embedded Systems & Internet of Things (IoT)
